

Last-minute openings

Today

Lena and Carla update Square, scan the Google Sheet, then text clients by hand.

Openings within 48 hours leave little time to manage every reply.

The Saturday problem

Two clients accepted the same haircut opening. Both arrived expecting it.

Goal: fill the opening with less staff follow-up and one clear confirmation.

One offer at a time

01 Match the opening

Check service, stylist, duration, and availability. Earliest eligible client goes first.

02 Hold it for that client

Allow 15 minutes for a same-day reply. A decline or timeout advances the queue.

03 Confirm a timely acceptance

Book immediately without staff approval. Expired offers cannot claim the opening.

Staff see the current offer and reply history. Clients can accept or decline.

The Saturday scenario

In the demo

Maya misses her deadline.

Alex receives the next offer. Maya replies late as Alex accepts in time.

Only Alex gets the booking. Staff can see Maya's rejected late reply.

Temporal keeps the process moving

The offer deadline lives in Temporal, so closing the browser does not stop it.

After a Worker restart, the process resumes from saved history. An expired offer advances when the Worker returns.

Demo timing: 10-second automated offers, or 30 seconds / 15 minutes in manual mode.

What this prototype includes

Working locally

Matching and waitlist order

One active offer with durable deadlines

Reply validation and booking protection within the demo

Staff status and client inbox views

Simulated or excluded

Square bookings, Google Sheets data, and SMS are local simulations.

No live cancellation feed, real texts, or authenticated client links.

A live Square integration must recheck availability to avoid conflicts with bookings made outside this workflow.

A small pilot with Lena and Carla

01 Rehearse together

Run a late reply, a timeout, and an empty waitlist. Confirm the staff view is clear.

02 Prepare the real connections

Test Square availability checks, SMS delivery, and secure client links before live use.

03 Agree on a limited trial

Choose the openings to include, next-day reply timing, and who handles failures.

Track openings filled, time to fill, staff follow-ups, and booking conflicts.

Before launch: confirm hosting and messaging costs. Results are not measured yet.
